

iDenedi
IDENEDI
for Crisis Management

What is iDenedi

iDenedi is an application specially designed for communication management through announcements.

Why Now

At critical times such as the one the whole world is currently facing, staying connected is crucial for companies that have found themselves forced into keeping business going on as usual while all their employees are working remotely.

With updates coming in as frequently as every hour, and companies having to amend their policies to adapt to the current situation, traditional announcement channels will not be effective or delivered as fast they are intended to.

This is why companies need a solution like IDENEDI, it provides a centralized and dedicated platform for sending announcements and keeping all employees connected

Challenges

Challenge 1

During times of crisis, like the COVID-19 health pandemic, rumors run rampant and misinformation is a source of stress.

Challenge 2

Information needs to be conveyed quickly and precisely, this is not easy when employees are not working directly in a single office.

Challenge 3

Situations change from hour to hour, so communication via email is not a good option as many employees do not check their email every few minutes for updates.

Key Benefits

What are the advantages of using iDenedi:

1. iDenedi announcements are secure and will be viewed as a reliable source of information.
2. iDenedi mimics social media and is intuitive and easy to use.
3. Using iDenedi guarantees announcements reach members at any time, and anywhere
4. Unlike WhatsApp, iDenedi announcements do not get lost in a continuous flow of conversation.

Features
